(54) NEW RICE PLANT STARCH-BRANCHED ENZYMIC GENE

(57)Abstract:

PURPOSE: To carry out the production increase of a food, production of rice excellent in taste and breeding of a plant, especially rice plant by isolating a gene of a new starch-branched enzyme having an important influence on the synthesis of amylopectin.

CONSTITUTION: A DNA sequence in which all or a part of a gene of a new rice starch-branched enzyme is bound to a promoter of the gene or a promoter expressible in a plant cell in the forward or reverse direction is transduced into a plant such as rice plant to express the gene of the starch-branched enzyme or an antisense RNA. Thereby, the content of amylose or amylopectin which is starch in grains can be changed.

## LEGAL STATUS

[Date of request for examination] 14.06.2000

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
